“Curiosity as a restless questioning, as a movement toward the revelation of something hidden, as a question verbalized or not, as a search for clarity, as a moment of attention, suggestion, and vigilance, constitutes an integral part of the phenomenon of being alive.

There could be no creativity without curiosity that moves us and sets us patiently impatient before a world that we did not make, to add to it something of our own making”.

Paulo Freire
Awakening the production of life from within us is wonderful. It is not an obligation, it is not an embarrassment. It is a radical freedom we own, to be able to choose starting life whenever we want.

This unrestrained capacity to produce life is the very experience that we share with other beings in this wonderful and indescribable living organism we call Gaia. But we get distracted, we get ill. And we forget about the whirlwind of life that is so alive that it escapes from our sight.

Instead of searching for life somewhere else, we can awaken from within us the vitality we are given when we arrive as a seed here on Earth. That vitality that is a wonderful and irremovable unity that explodes in life, creates worlds and recharges all the Springs.
From within ourselves, we can awaken life, health, and impact those around us. And with that acupressure which starts somewhere inside myself like a creative wave, it spreads all around. It heals the sky’s bosom, it heals the place where we are.

It is wonderful because everything exists from that tiny point that we can activate within ourselves. There is no whole without the place. And the place is an infinity of points that creates what is the whole.

So we need to work on ourselves, where each one of us is. We need to take consciousness. Acupressure, do the movement in that place where there’s pain. Acupressure is a healing technique of care. After freeing that point, move on to another one. This movement dissolves in different places of this vast organism that is Earth, those energies that are blocked and are creating fear, anguish and becoming a disease.
The urgency that surrounds us, this feeling of immobility in the face of such an enormous crisis, can take away our vital energy, our life zing and our ability to produce affection. This is not out there, outside.

The source of the creative life energy depends on us meeting the place where we are and reconciling ourselves with this wonderful life experience which we are called upon to perform.

When we find deserts in front of us, we must not run, but cross them. Life is insurgency, it is not accommodation. We will be seeds in the world and life triggers wherever we are - anywhere, in that place that is ours.

If what exists prevents us from being free, we have to question what gets in our way. This questioning approach is the basis of any effective transformative action: the action of refusing to surrender to unquestionable truths and of actively not conforming, to change a world that is turned upside down.

Through a continuously questioning and reflective nature of activism we better understand what is at stake and restlessly move outside our comfort zones to promote transformations. This intentional unlearning helps us to rescue our human potential to build other realities. After all, what do we want to keep? What do we want to change?

The call to guarantee our right to a future has never been more important. We have already reached the planetary limits that condition and support our existence. We need everyone, together and right now, to face an urgent task: to safeguard our basic right to revolt - to create for ourselves a new world.
Other possible futures need to be imagined, beyond the dystopian horizons so widespread in such arid times. It needs to start with our right to think free, to think that we can be more - as Paulo Freire said, when referring to freedom as an imperative to our existence. Cultivating our precious ability to question is a way to reactivate our curiosity and our restless practice of challenging the status quo.

Given the depth and scale of the crisis we are experiencing, we cannot postpone what is required of us: facing the climate emergency. the historic task of our time. We need to break the inertia of indifference and to collectively overcome the feeling of helplessness in the face of the magnitude of this problem.
Over the years, our childish resourcefulness to explore the world through questions has been restricted and labeled as an inconvenience, a defect, a disease and even a crime. By killing our ability to question, assumptions become certainties at the speed of a click. It feels like being surrendered to the inconvenience of not being able to be truly free, serves as an invitation to the dangerous proliferation of followers of unique systems of truth.

Questioning is an antidote against attitudes of indifference, empty speeches, subjugation values, fatalistic lullabies, authoritarian behaviors, superficial arguments and dogmatic generalizations.
Questioning rescues us, offers us an embryo of freedom so that we are not paralyzed by a culture of political impotence and by the fatalistic ideology of “the end of history”. Anything can be questioned.

The following questions were generated by activists in learning processes around the world in recent years. It may be liberating to share these, humbly knowing that they may deepen our impulses for transformative interventions in the world.

A most inconvenient question posed to us at this point is about our ability to respond to a threat to our own existence. As the so deeply missed Uruguayan poet Eduardo Galeano wrote, “how about we begin to exercise the never-proclaimed right to dream? How about we rave for a moment?”. It is up to us to be bold.
